To update your Netlify-deployed portfolio without changing the URL, you have a few options depending on how you initially deployed it:

Option 1: Git-based Deployment (Recommended)

If your portfolio is connected to a Git repository (GitHub, GitLab, etc.):

1. **Push your changes to the connected branch:**

```bash
git add .
git commit -m "Update portfolio"
git push origin main
```

2. **Netlify will automatically redeploy** - No action needed on your part!

Option 2: Manual Deployment via Netlify CLI

If you deployed manually or want to use the CLI:

1. **Install Netlify CLI** (if not already installed):

```bash
npm install -g netlify-cli
```

2. **Build your project** (if needed):

```bash
npm run build
# or
yarn build
# or
bun run build
```

3. **Deploy to your existing site:**

```bash
netlify deploy --prod --dir=dist
```
